Daniel Rosario

Senior Full Stack AI Engineer | **React**, **Node.js**, **AWS**, **AI Integration**

danrosario0604@gmail.com | 63-991-022-6068 | Central Luzon, Philippines | https://www.linkedin.com/in/daniel-del-rosario-840985356/

SUMMARY

I'm a Full-Stack AI Engineer with experience building websites and AI-powered products from start to finish. I work across both the front end and back end, using technologies like **React**, **Next.js**, **Node.js**, **Python**, and **TypeScript**. I also work with AI models and APIs to build features like **AI** assistants, automation tools, smart search, data processing, and other AI-driven applications. I enjoy taking an idea and turning it into something that actually works. That might mean building the user interface, developing the backend and APIs, connecting AI services, working with databases, or deploying everything to the cloud. I've worked with different teams and clients, so I'm comfortable jumping into an existing project or building something new from the ground up.

PROFESSIONAL EXPERIENCE

Senior Full Stack AI Engineer

Jan 2025 - Present

10XCoach.ai · Remote

- Designed AI-powered search and recommendation infrastructure for travel discovery and customer support workflows serving millions of monthly users — spanning personalization, retrieval relevance, and operational AI tooling.
- Built agentic orchestration using **LangGraph** integrating retrieval pipelines, structured APIs, and **LLM**-driven decision workflows; reduced p95 latency from 4.3s to 2.5s while lowering infrastructure costs by 18%.
- Implemented hybrid retrieval architecture (dense embeddings + **BM25** + reranking + query rewriting) addressing high-ambiguity search and support queries where single-method retrieval consistently broke down.
- Developed multimodal retrieval combining property metadata, customer interactions, and image-based signals to improve contextual relevance across search and recommendation services.
- Built AI evaluation and observability framework using **LangSmith**, **Phoenix**, and **OpenTelemetry** — enabling hallucination detection, response quality analysis, and workflow tracing across production LLM services.
- Mentored engineers on production LLM architecture, evaluation strategies, and distributed systems best practices.- Integrated **GraphQL API** with Apollo Client, optimizing API requests and reducing payload sizes.

Software Engineer

Nov 2022 - Nov 2024

Sky Talent Management · Remote

- Led the full-stack development of an AI-powered sales agent platform tailored for e-commerce businesses. My work spanned backend architecture, frontend interfaces, and **UI/UX** design.
- Developed a chatbot creation and management dashboard enabling businesses to design and configure their own automated sales agents.
- Implemented WhatsApp integration using official APIs for real-time customer communication and engagement.
- Built and maintained the chat log database, including storage, retrieval, and a reporting dashboard for analytics.
- Integrated external APIs and services to support chat routing, voice input, and customer data synchronization.
- Designed and optimized **RESTful APIs** using **Flask** for scalable backend operations.
- Built dynamic and responsive frontend components using React.js to support the user-facing dashboard.
- Used WordPress to manage **CMS**-related requirements and public-facing content.
- Implemented document indexing and retrieval using **Chroma** vector database for storing custom document data.
- Engineered RESTful APIs with Node.js, ensuring seamless communication between frontend and backend systems.
- Established database schemas in PostgreSQL, optimizing data retrieval processes for faster application performance.
- Pioneered integration of third-party APIs into existing applications, expanding functionality and user engagement.
- Elevated security measures by implementing JWT for user authentication, reducing unauthorized access attempts by 25%.
- Simplified deployment processes using AWS, streamlining application updates and maintenance schedules.

Junior Full Stack Developer

Jul 2019 - Sep 2022

Morphlabs · Remote

- Developed a progressive web app (PWA) that increased user engagement by 35% through offline capabilities and fast load times.
- Spearheaded the migration from **jQuery** and **Backbone.js** to **React.js**, modernizing the application and reducing code complexity.
- **React**, **Next**, **Vue**, **Angular, Redux**, **Vuex**, **Context API**, **MongoDB** UI/UX Development Webpack, Babel, CI/CD Pipelines RESTful APIs, GraphQL, WebSockets.
- Designed and implemented a custom drag-and-drop UI for a **SaaS** platform, significantly improving usability.
- Built an interactive data visualization dashboard with **D3.js** and **Chart.js**, allowing real-time analytics monitoring.
- Integrated GraphQL API with Apollo Client, optimizing API requests and reducing payload sizes.
- Introduced unit and E2E testing strategies, increasing code coverage from 20% to 85%.
- Developed dynamic, multi-language support using i18n libraries, expanding the product's reach to global markets.
- Built reusable **React** components and integrated them with **RESTful APIs** to display and manage dynamic application data.
- Assisted with backend development using Node.js and Express.js, including creating API endpoints and implementing basic business logic.
- Worked with **MongoDB** and **MySQL** to store, retrieve, and update application data for various frontend features.
- Implemented user authentication and authorization features, including login, registration, protected routes, and role-based access.
- Used Redux and **Context API** for application state management and helped simplify data sharing between React components.
- Fixed frontend and backend bugs, improved existing features, and participated in code reviews with senior developers.
- Used **Git**, **GitHub**, **Docker**, and **CI/CD** workflows as part of the development process and assisted with deploying application updates to development and production environments.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL
Frontend: React, Next.js, Tailwind CSS, responsive design
Backend: Node.js, FastAPI, REST APIs, asynchronous processing
AI Integration: OpenAI, LangChain, embeddings, LLM APIs
Databases: PostgreSQL, Redis, vector databases, caching
Cloud: AWS, Docker, Kubernetes, CI/CD pipelines
Security: JWT, OAuth, role-based access control, API security
DevOps: GitHub Actions, Terraform, monitoring, application performance

EDUCATION

Bachelor's Degree, Computer Science - Tarlac State University (2015 - 2019)
